Additional Manufacturing location(s):

This certificate is issued as verification that a sample(s), representative of production, was assessed and tested and found to comply with the IEC Standard list below and that the manufacturer's quality system, relating to the Ex products covered by this certificate, was assessed and found to comply with the IECEx Quality system requirements. This certificate is granted subject to the conditions as set out in IECEx Scheme Rules, IECEx 02 and Operational Documents as amended.

STANDARDS:

The electrical apparatus and any acceptable variations to it specified in the schedule of this certificate and the identified documents, was found to comply with the following standards:

IEC 60079-0 : 2011 Edition:6.0	Explosive atmospheres - Part 0: General requirements
IEC 60079-11 : 2011 Edition:6.0	Explosive atmospheres - Part 11: Equipment protection by intrinsic safety "i"
IEC 60079-15 : 2010 Edition:4	Explosive atmospheres - Part 15: Equipment protection by type of protection "n"
IEC 60079-31 : 2013 Edition:2	Explosive atmospheres - Part 31: Equipment dust ignition protection by enclosure "t"

This Certificate does not indicate compliance with electrical safety and performance requirements other than those expressly included in the Standards listed above.

EQUIPMENT:

Equipment and systems covered by this certificate are as follows:

The explosion protected electrical sensor, type RedBin-.. is used for the measurement of pressures, humidity and/or temperatures and for the conversion of measurements into switching signals. The equipment is intended for the application inside the hazardous area.

The RedBin-..is used stationary in a hazardous area.

The sensor circuits of the RedBin-.. can be used in hazardous areas of the category 1G and 1D if the related sensors comply with these requirements.

The Sensors type ExPro-B.. can be used in hazardous areas of the categories 2G and 2D and are available in different technical designs according to the respective application site.

The correlation between the explosion group and the permissible outer reactances can be obtained from the respective table.

Electrical data:

Supply..... U = 24 VAC/DC \pm 20 %, 50 ..60 Hz
(Terminals 1, 2) U_m 30 V

Auxiliary contacts..... U = 24 VAC/DC \pm 20 %, 50 ..60 Hz
(Terminals 3...4) U_m = 30 V

Relay contacts..... V AC = 250 V / 0,1 A
(Terminals 5...10) 125 VA / 0,2 A
30 V / 0,5 A

resp.

V DC = 220 V / 0,1 A
110 V / 0,2 A
30 V / 0,5 A

The relay contacts are safely galvanically separated from the other circuits up to a maximum value of the rated voltage of 375 V.
